

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

Date	15 October 2022
Team ID	PNT2022TMID35486
Project Name	A Gesture -based tool for sterile browsing of Radiology Images
Maximum Marks	4 Marks

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Launching the model	Launch the trained CNN model from the cloud
FR-2	Capturing the images	After capturing the images in camera we have to upload the images in the system
FR-3	Performing gestures	After classifying, identify the correct image by the gesture and it should perform the operation
FR-4	Model rendering	After capturing the image the algorithm will start its processing task
FR-5	Sterile browsing	The sterile browsing can be performed after identifying the gestures
FR-6	Visibility of images	After completing all the process, a user can be able to see the images

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	This system helps to have the control over images without having direct contact with system which avoids the harmful rays and is ease of use
NFR-2	<b>Security</b>	This system is protected and only authorized users can access it
NFR-3	<b>Reliability</b>	After installing the application, the system will predict the gesture and performs sterile browsing
NFR-4	<b>Performance</b>	The system responds to a user in seconds and the hardware and software works well
NFR-5	<b>Availability</b>	It is accessible by authorised user from anywhere at any time whenever there is an emergency
NFR-6	<b>Scalability</b>	This system allows more number of users at a time and there is no loss can be identified
