ASSIGNMENT 1

PYTHON PROGRAMMING

Assignment Date	10 September 2022
Student Name	Tejaswini S
Student Roll Number	2019105590
Maximum Marks	2 Marks

1. Split this string

```python
s = "Hi there Sam!"
```

```python
s= "Hi there Sam!"
word=s.split(' ')
print(word)
```

```
['Hi', 'there', 'Sam!']
```

2. Use .format() to print the following string.

Output should be: The diameter of Earth is 12742 kilometers.

```python
planet = "Earth"
diameter = 12742
```

```python
planet = "Earth"
diameter = 12742
string="The diameter of {} is {} kilometers".format(planet,diameter)
print(string)
```

```
The diameter of Earth is 12742 kilometers
```

3. In this nest dictionary grab the word "hello"

```python
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
```

```python
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
print(d['k1'][3]['tricky'][3]['target'][3])
```

```
hello
```

Numpy

```
import numpy as np
```

4.1 Create an array of 10 zeros?

4.2 Create an array of 10 fives?

```
import numpy as np
zeroarray=np.zeros(10)
print(zeroarray)
```

```
[0. 0. 0. 0. 0. 0. 0. 0. 0. 0.]
```

```
import numpy as np
fivearray=np.ones(10)*5
print(fivearray)
```

```
[5. 5. 5. 5. 5. 5. 5. 5. 5. 5.]
```

5. Create an array of all the even integers from 20 to 35

```
import numpy as np
evenarray=np.arange(20,35,2)
print(evenarray)
```

```
[20 22 24 26 28 30 32 34]
```

6. Create a 3x3 matrix with values ranging from 0 to 8

```
import numpy as np
matrix=np.arange(0,9).reshape(3,3)
print(matrix)
```

```
[[0 1 2]
 [3 4 5]
 [6 7 8]]
```

7. Concatenate a and b

a = np.array([1, 2, 3]), b = np.array([4, 5, 6])

```
import numpy as np
a=np.array([1,2,3])
b=np.array([4,5,6])
c=np.concatenate((a,b),axis=0)
print(c)
```

```
[1 2 3 4 5 6]
```

Pandas

8. Create a dataframe with 3 rows and 2 columns

```python
import pandas as pd
```

```python
import pandas as pd
data =[['Hydrogen','1'],['Helium','2'],['Zinc','30']]
dataframe=pd.DataFrame(data,columns=['Element', 'Atomic Number'])
print(dataframe)
```

```
    Element Atomic Number
0  Hydrogen             1
1    Helium             2
2      Zinc            30
```

9. Generate the series of dates from 1st Jan, 2023 to 10th Feb, 2023

```python
import pandas as pd
a=pd.date_range(start='1-1-2023',end='2-10-2023')
for days in a:
    print(days)
```

```
2023-01-01 00:00:00
2023-01-02 00:00:00
2023-01-03 00:00:00
2023-01-04 00:00:00
2023-01-05 00:00:00

2023-02-09 00:00:00
2023-02-10 00:00:00
```

10. Create 2D list to DataFrame

lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]

```python
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
```

```python
import pandas as pd
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
df=pd.DataFrame(lists,columns=['S.No','Name','Marks'])
print(df)
```

```
   S.No Name  Marks
0     1  aaa     22
1     2  bbb     25
2     3  ccc     24
```
